MANOSKOP® 714

Electromechanical torque and angle-controlled wrench

Benefits at a glance:

- Indicating and with cut-out
- 4 measuring methods (torque, angle, torque backed up by angle, angle backed up by torque)
- Freely configurable menu structure
- Includes Sensomaster software for easy configuration of the tool
- 3 function modes: cut-out, peak (indicating mode displaying peak reading) and track (indicating mode displaying current value)
- Angle-controlled measurement without a reference arm
- Data storage (\leq 2,500 tightening jobs)
- Acoustic and visual assessment of the joint
- Clockwise and anticlockwise tightening
- Tactile and acoustic trigger signals
- Torque and angle are simultaneously visible
- All readings are independent of the point of application of force with sizes 1, 2 and 4
- Display deviation value \pm 2 % for torque and \pm 1 % for angle

5

1

High-definition graphical colour display with additional side-mounted indicator lamps

2

Automatic key-lock prevents inadvertent changes

3

Fast, accurate setting via keypad

4

Own ident number can be stored in the wrench

5

Indicator lamps clearly visible from all sides

Yellow light: advance warning threshold reached

Green light: within the target range

Red light: reading is outside the tolerance range

6

In a sturdy plastic case with foam inlays (sizes 40-100 in steel case)

With certificate

NEW

Also available with adaptor for 22 x 28 mm

- Tighten large torques effortlessly
- High long-term durability
- 650 – 1000 Nm

5

7

Optional extras: Li-Ionen battery No 7195-2 and charger No 7160

8

Individually configurable menus

9

Micro USB interface

10

Battery compartment with smooth-action bayonet fitting

11

Up to 200 joints can be programmed in up to 25 sequences

12

The wrench reminds the user automatically when calibration is due – either by the number of joints or the time interval

Further details
on pp. 180

Sensotork® 713R

Electronic torque wrench/
angle-controlled wrench

Benefits at a glance:

- Angle-controlled measurements without a reference arm
- Broad measuring range (5% - 100% of rated value)
- Extremely wide range of angle measurement
- Units of measurement N m / ft.lb / in.lb
- Clockwise and anticlockwise use
- For use with all insert tools 9x12 and 14x18 mm
- QuickSelect rapid recall of predefine sets of operating parameters
- Defined sequence - a number of repeated joints can be grouped as
- a defined sequence
- Readings can either be directly stored, transmitted to the PC or simply displayed
- Password protection tamper proof use
- Freely selectable names for each series of test
- Various languages available
- Works-specific identifier
- Programmable via PC
- Resistant to oils, grease, fuels, brake fluids and Skydrol
- Wide range of application: -20°C to +60°C
- Meets requirements of DKD-R 3-7, Class 2
- Deviation of indication ± 1%

5

1

Warning signals: acoustic (buzzer), tactile (vibration in the handle), visual (LEDs and display). The point at which the warning signal is triggered can be freely set

2

Amazingly simple handling

All functions are selected using the arrow keys. The visual guidance system makes operation a simple matter

3

Measurements independent of the point of application of force (sizes 6 and 20)

5
4

Easy extension setting

Where the insert tool requires an extension adjustment, simply enter the new value. Recalculation using complicated formulae is no longer necessary

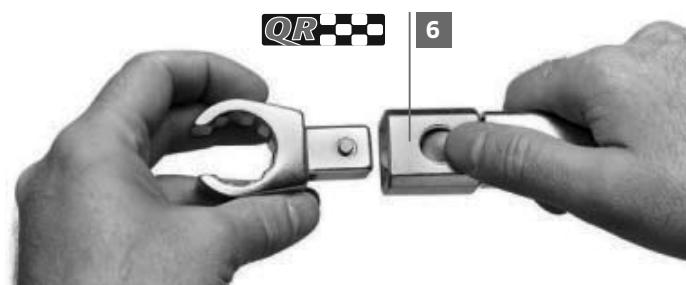

5

Data output USB interface

6

QuickRelease

Firm locking and rapid change of any insert tools

5

QR

Further details
on pp. 191

MANOSKOP® 730D

Electromechanical torque wrench

Benefits at a glance:

- Cut-out and indicating
- Displays the torque actually applied after the wrench cuts out. In this way, the user has the opportunity to optimise his or her working methods.
- Units of measurement: N m / ft.lb / in.lb
- Automatic keypad lock
- Display also works for anticlockwise torque
- Angle-controlled measurement without a reference arm using a supplementary module
- Overload protection by means of acoustic and visual signals
- Automatic compensation to achieve correct tightening torque even if a changed extension is entered
- Different tolerance limits can be set for each joint
- Visual red and green signals in the display confirm the status of the joint
- Additional security for presets using PIN code
- Automatic notification of the next calibration date
- Deviation of indication \pm 2%

5

Measure, cut-out and record: When the preset torque is reached, the torque wrench cuts out and indicates this fact to the user via a definite tactile and audible signal. The tightening torques are stored. The data can be transferred to a PC for evaluation and documentation.

1

The square drive enables a broad range of insert tools

2

Dual stop signal with tactile and acoustic cut-out signals

3

Easy-to-read display

4

Rapid setting

The convenient keypad enables the torque wrench to be quickly and easily set

NEW

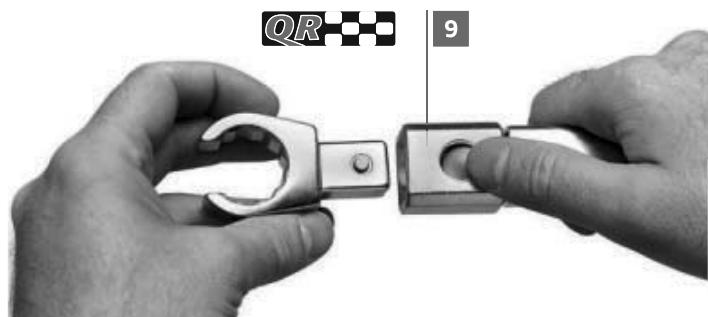

Also available with adaptor for 22 x 28 mm

- Tighten large torques effortlessly
- High long-term durability
- 650 – 1000 Nm

7395-1

5

5

Power supply two 1.5 V AA batteries

6

Angle controlled tightening

Simply attach the Angle Module No 7395-1 and connect the cable to the interface

7

Data output USB interface

8

2-component handle has ergonomically designed, green softer layers and is
resistant to oils, grease, fuels, brake fluids and Skydrol.

9

QuickRelease safety lock

Further details
on pp. 184

MANOSKOP® 730N

Mechanical torque wrench

Benefits at a glance:

- Accurate one-handed setting – quick & easy control using the knob at the end of the handle
- Audible setting positions
- Fail-safe setting mechanism in the knob
- Clearly readable twin scale (Nm and ft.lb)
- Noticeable double signals when the preset torque is reached
- Square drives with
- QuickRelease safety locks – for 9x12, 14x18 and 22x28 mm
- Handle is resistant to oils, grease, fuels, brake fluids and Skydrol
- Deviation of indication \pm 3%

5

1 Protected mechanism extremely resistant to mechanical wear, protected against dirt inside the outer housing

2 Easily readable double scale. The colour differentiation between the Nm and ft.lb scales simplifies fine setting

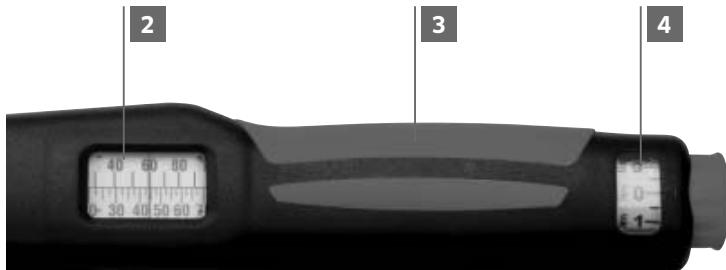

3 Two-component handle made of extremely tough, impact resistant plastic with a kind-to-the-hands softer layer

4 Ring scale with fine settings for the black measuring range on the twin scale

5 QuickSelect rapid setting: Pull, set, lock. All using the one setting knob

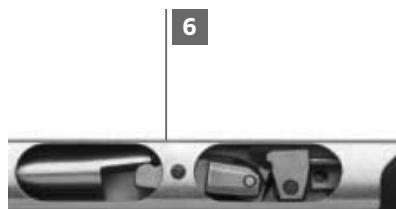

6 No need for manual reset to zero thanks to the wear-free triggering cam system. The measuring element is only under load while force is being applied.

NEW

Also available with adaptor for 22 x 28 mm

- Tighten large torques effortlessly
- High long-term durability
- 650 – 1000 Nm

5

7 The square drive enables a broad range of tightening tools

8 Rapid adjustment from outside, no disassembly of the torque wrench

9 QuickRelease safety lock
Firm locking and rapid change of insert tools thanks to the QuickRelease safety lock

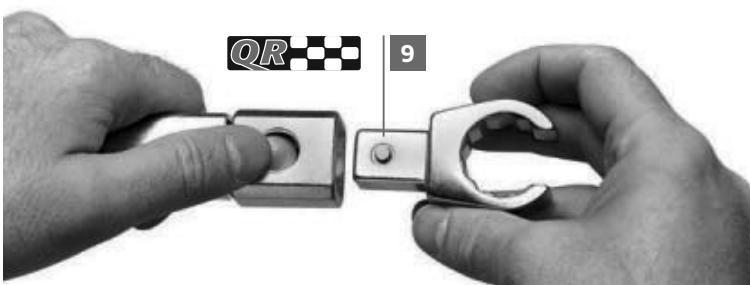

10 Integrated clockwise and anticlockwise operation simply by turning over the wrench and insert tool

9

Further details
on pp. 186

MANOSKOP® 714 - indicating and cut-out

Electromechanical torque and angle-controlled wrench

- 4 measuring modes (torque, angle, torque backed up by angle, angle backed up by torque)
- high-definition colour display with additional side-mounted indicator lamps
- freely configurable menu structure
- optionally: Li-ion battery No 7195-2 and charger No 7160
- 3 function modes: cut-out, peak (indicating mode with peak value) and track (indicating mode with current value)
- Micro USB interface
- bayonet connection for battery compartment
- QuickRelease safety lock change system for insert tools
- angle-controlled measurement without a reference arm Data storage (≤ 2500 tightening jobs)
- as many as 200 joints can be programmed in up to 25 preset sequences.
- different tolerance limits can be set for each joint
- acoustic and visual assessment of the joint
- rapid, accurate setting via keypad
- the automatic keypad lock prevents inadvertent changes
- overload protection by means of acoustic and visual signals and a fail-safe system (clockwise)
- automatic notification of the next calibration date, either by the number of joints or the time interval
- fully automated calibrating and adjusting using the perfectControl calibrating and adjusting unit No 7794-2 (torque) or 7794-3 (torque and angle)

196-
203

- units of measure: N m, ft.lb, in.lb.
- tightening torque is automatically corrected if a deviating extension is entered
- immediately reusable after release
- clockwise and anticlockwise tightening – it may be necessary to refit the insert tool rotated through 180° for anticlockwise tightening in the cut-out mode
- tactile and acoustic trigger signal.
- torque and angle are simultaneously visible
- all readings are independent of the point of application of force (with sizes 1, 2 and 4)
- safe handling due to ergonomically designed handle (resistant to oils, grease, fuels, brake fluid and Skydrol)
- 2 certificates (torque, angle)
- in sturdy plastic case (size 40-100 in steel case)
- design patent, patent
- supplied with Sensomaster Basic software, USB cable, 4 AAA/LR03 micro-batteries, 1.5 V. AAA, 1.2 V, micro NiMH rechargeable batteries can be used
- display resolution, angle 0.1°
- display deviation value, angle $\pm 1\%$, ± 1 digit
- display resolution, torque ≤ 60 N m: 0.01 N m; > 60 N m: 0.1 N m
- display deviation value, torque $\pm 2\%$, ± 1 digit

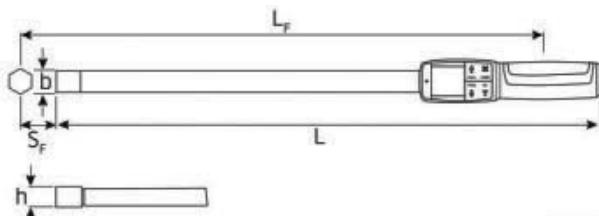

5

7732-1
SENSOMASTER Premium Assembly software

for MANOSKOP® 714.

- For recording additional information on the tightening operation (e.g. employee name, assembly designation, operation). As many as 5 data fields can be configured.
- Sequence control on the basis of information recorded.
- Support for various workflows.
- The torque wrench can be blocked at the end of the tightening sequence.
- Work sequences can be resumed after an interruption.
- Automatic export of joint data for further processing on a PC. User-specific content is possible on request.
- Automatic log data print-out. User-specific formats are possible on request.

7732-2
SENSOMASTER Live software

- Record tightening operations with the MANOSKOP® 714 and 714 AUDIT.
- Representation of torque over time, angle over time, torque over angle.
- Representation of several curves simultaneously.
- Data export for further processing.

MANOSKOP® 714 AUDIT - indicating electronic angle-controlled torque wrench for joint auditing

- 2 audit modes (prevail torque and loosen-tighten)
- 4 measuring modes (torque, angle, torque backed up by angle, angle backed up by torque)
- high-definition colour display with additional side-mounted indicator lamps
- freely configurable menu structure
- optionally: Li-ion battery No 7195-2 and charger No 7160
- 2 function modes: peak (indicating mode with peak value) and track (indicating mode with current value)
- Micro USB interface
- bayonet connection for battery compartment
- QuickRelease safety lock change system for insert tools
- angle-controlled measurement without a reference arm
- Data storage (≤ 2500 tightening jobs)
- as many as 200 joints can be programmed in up to 25 preset sequences.
- different tolerance limits can be set for each joint
- acoustic and visual assessment of the joint
- rapid, accurate setting via keypad
- the automatic keypad lock prevents inadvertent changes
- overload protection by means of acoustic and visual signals
- automatic notification of the next calibration date, either by the number of joints or the time interval

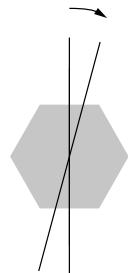

**196-
203**

- fully automated calibrating and adjusting using the perfectControl calibrating and adjusting unit No 7794-2 (torque) or 7794-3 (torque and angle)
- units of measure: N m, ft.lb, in.lb.
- tightening torque is automatically corrected if a deviating extension is entered
- immediately reusable after release
- clockwise and anticlockwise tightening
- torque and angle are simultaneously visible
- all readings are independent of the point of application of force
- safe handling due to ergonomically designed handle (resistant to oils, grease, fuels, brake fluid and Skydrol)
- 2 certificates (torque, angle)
- in sturdy plastic case (size 40 in steel case)
- design patent
- supplied together with SENSOMASTER Premium Audit software (single-installation licence, additional licences on request), USB cable, 4 AAA/LR03 micro-batteries, 1.5 V. AAA, 1.2 V, micro NiMH rechargeable batteries can be used
- display resolution, angle 0.1°
- display deviation value, angle $\pm 1\%$, ± 1 digit
- display resolution, torque d 60 N m: 0.01 N m; > 60 N m: 0.1 N m
- display deviation value, torque $\pm 1\%$, ± 1 digit

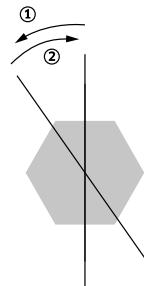

714 AUDIT Basic wrenches with tool carrier for insert tools

2 audit modes

Prevail torque:
After torquing, a further defined angle is applied with the torque wrench. When the target angle is reached, the torque applied at that moment is stored.

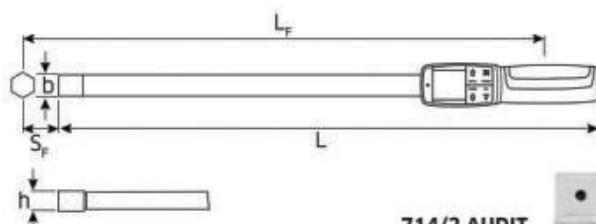

Loosen-tighten:
The joint is loosened by a defined angle in the first step and then tightened again to the original position. When the target angle is reached, the torque applied at that moment is stored.

Service work & series production MANOSKOP® - indicating and cut-out

- tactile and acoustic trigger signal
- mount for interchangeable insert tools
- QuickRelease safety lock
- fast setting using convenient keypad
- automatic compensation to achieve correct tightening torque even if a changed extension is entered
- overload protection by means of acoustic and visual signals
- automatic keypad lock prevents inadvertent changes
- angle-controlled measurements without a reference arm using Angle Module No 7395-1 (refer to page 185)
- display also works for anticlockwise torque
- units of measurement: N m, ft.lb, in.lb
- different tolerance limits can be set for each joint
- visual red and green signals in the display confirm the status of the joint

196-
203

- additional security for presets (function mode, trigger or preset value, unit of measurement, tolerance, save, deviating extension) using PIN code
- up to 7.500 measurements can be stored
- USB interface
- automatic notification of the next calibration date
- calibration using perfectControl calibrating unit No 7794 or calibration system No 7706
- two-component handle with ergonomically designed green softer layers (resistant to oils, grease, fuels, brake fluids and Skydrol)
- with certificate
- in sturdy plastic case (sizes 40-100 in steel case)
- patent
- supplied with two 1.5 V AA batteries. AA/LR6, 1.2 V rechargeable cells may also be used
- display deviation value $\pm 2\%$

Documentation and management of readings on a PC

- Read out stored wrench data and joint readings:
 - Joint identifier
 - Tool serial number
 - Date and time of tightening operation
 - Target torque or target angle
 - Torque level at which the tool cuts out
 - Tightening torque or angle reached
 - Tolerances
 - Joint evaluation
- Storage of joint data in a database
- Delete or print highlighted joints from the database
- Export displayed joint data to a CSV file (compatible with Excel)
- 13 languages
- User management
- Define new PIN
- Delete joint data stored in wrench

System requirements:

- PC
- Microsoft Windows 98 SE or compatible operating system with USB support
- USB connection
- Installed ODBC driver for Access data

Torque tools

Service MANOSKOP® 730N

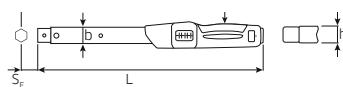

- cut-out type
- mount for interchangeable insert tools
- QuickRelease safety lock
- fast, accurate setting thanks to QuickSelect quick-action adjuster
- dual stop signal
- easy-to-read double scale with colour coding to differentiate between N m and ft.lb scales
- the measuring element is only under load while force is being applied, no need for manual reset to zero
- can be applied for either clockwise or anticlockwise tightening by turning the inserts over

196-
203

- any force applied to the tool after the "click" or applied in the opposite direction to the current function - e.g. forcible loosening of a jammed screw - does not act on the trigger mechanism and cannot cause damage to it.
- two-component handle with ergonomically designed green softer layers (resistant to oils, grease, fuels, brake fluids and Skydrol)
- calibration using perfectControl calibrating unit No 7794 or calibration system No 7706. Adjustment without disassembly.
- with certificate
- registered design
- display deviation value $\pm 3\%$

7161

QuickRelease safety lock

prevents insert tools being swapped. The system is locked in place on the head of the torque wrench by means of a safety screw. Once the protection system has been fitted, it is possible to attach an insert tool but not to remove it because the QuickRelease unlock button itself is locked. After the safety screw has been removed, the torque wrench reverts to being a standard, versatile tool.

The safety screw can be fitted and removed using a TORX® screwdriver with a central bore in the tip (No 4656, Size T20, Code 46 56 00 20) or a BITS screwdriver insert with a central bore in the tip (No 1442, Size T20, Code 08 16 00 20).

7396

LED lighting

for torque wrenches
If light is poor, simply attach this LED lamp to illuminate the work site.
Included in the delivery is a 1.5 V micro battery.
Supplied without torque wrench.

Indicating torque wrenches

Electronic angle-controlled torque wrench Sensotork® 713

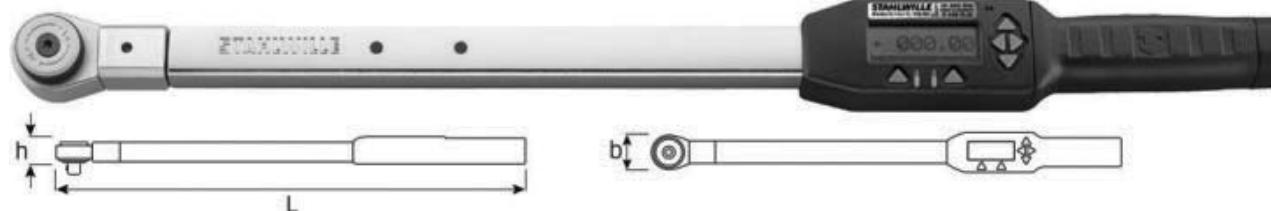

- simple, flexible operation thanks to operator guidance on large-format display
- very broad measuring range (5% to 100% of rated value)
- supplied with insert tool reversible ratchet, more insert tools
- QuickRelease safety lock
- for clockwise and anticlockwise torquing
- measurements independent of the point of application of force (sizes 6 and 20)
- units of measurement: N m, ft.lb, in.lb
- advance warning points programmable for visual, tactile and acoustic signals
- torque and angle are simultaneously visible
- convenient angle measurement across a very wide angle range without a reference arm
- insert tool lengths can be individually set
- maintenance friendly due to easy adjustment and automatic reminder of next calibration date

196-
203

- repeated joints can be collated to form a single menu-guided sequence
- individual identification markings possible
- password protection to prevent inadvertent changes and make the tool tamper-proof
- meets requirements of DKD-R 3-7, Class 2
- with certificate
- in sturdy plastic case (size 40 in tough steel case)
- supplied with three 1.5 V AA batteries. AA/LR6, 1.2 V NiMH rechargeable cells may also be used
- fully automated calibration (torque) using perfectControl calibrating unit No 7794-2. Adjustment without disassembly.
- registered design
- display deviation value for angle $\pm 1^\circ$
- display deviation value $\pm 1\%$

7759-1

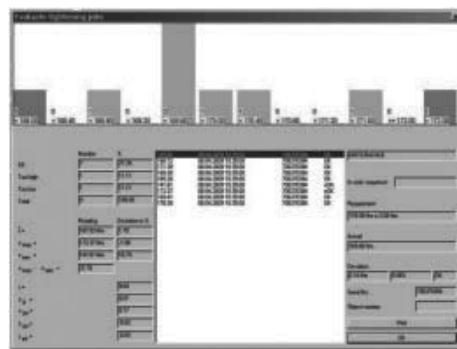

USB adaptor, jack cable and software SENOMASTER for No 712R, 713R

for documenting and managing readings on a PC and carrying out statistical analyses.

- Read out stored wrench data and joint readings: Joint identifier, Tool serial number, Target torque or target angle, Torque level at which the tool cuts out, Tightening torque or angle reached, Tolerances, Joint evaluation
- Storage of joint data in a database
- Delete or print highlighted joints from the database
- Export displayed joint data to a CSV file (compatible with Excel)
- 13 languages
- User management
- Define new PIN
- Delete joint data stored in wrench

System requirements:

- PC
- Microsoft Windows 98 SE or compatible operating system with USB support
- USB connection
- Installed ODBC driver for Access data

Torque screwdriver

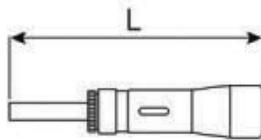

TORSIOMAX 775

- cut-out type
- for torque-controlled bolt tightening in the cN m and in.lb ranges
- for one-off or production runs
- measuring element is a screw compression spring
- anticlockwise and clockwise tightening
- with 1/4" internal hex drive (F 6.3 DIN 3126/ISO1173)
- infinitely variable via micrometer scale (twist scale)
- disengaging clutch coupling prevents the preset value being exceeded

- the shape of the handle and its surface texture ensure safe and accurate transmission of torque
- insert tools: For all 1/4" hex E 6.3, Phillips-head screws, POZIDRIV / SUPADRIV®, straight-slot, TORX®, hex BITS (see pp. 167, 168). For very small joints, BITS with a 4 mm hex drive and an adapter No 3115/2 for BITS screwdriver inserts, Type C4, and external hex 1/4" (E 6.3 DIN 3126/ISO 1173) are required (refer to pages 162, 165).
- with certificate
- display deviation value ± 6%

¹⁾ with a swivelling handle-end to improve tool control; and with a clamping screw for locking the preset.

²⁾ with an additional locking mechanism to prevent the selected torque being inadvertently adjusted.

³⁾ with screw-on handles for increasing the force applied for large torques.

Note!

Torque tightening tools are measuring instruments.

They must be regularly calibrated with suitable instruments and adjusted accordingly (see DIN EN ISO 6789, 5.3 Recalibrating).

TORSIOMETER 760

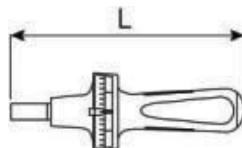

- indicating type
- the measuring element is a torsional leaf spring
- clockwise tightening (with trailing pointer) and anticlockwise tightening
- with 1/4" internal hex drive (F 6.3 DIN 3126)
- comparative scale in in.lb and cursor
- inserts and adaptors with external hex E 6.3

(1/4") DIN 3126/ISO 1173 are securely held and firmly controlled in the mounting shaft (for BITS screwdriver inserts, refer to pages 167, 168).

- to attach 1/4" sockets, please order adaptor No 3115 (refer to page 166)
- with certificate
- display deviation value $\pm 4\%$

STAHLWILLE is an accredited calibrating laboratory.

Controlled tightening is a must in terms of safety and the lifetimes of the screws and bolts. STAHLWILLE has been awarded accreditation as a calibrating laboratory for torque by the German Accreditation Body (DAkkS) because of the Company's skills in the field of torque controlled tightening.

- Included in the price of calibration of STAHLWILLE products are the costs of any adjustment required and a second calibration operation.
- In addition, the STAHLWILLE calibration service provides complete monitoring, documentation archiving and follow-up timing for torque wrenches and testers.
- Additional information on these services is available on request.

5

The STAHLWILLE calibration service is in a position to offer both the usual **works calibration certificate** and the **DAkkS certificate**.

7380N/7385N Torque angle gauges

for angle controlled bolt/screw tightening, with static read-off point. Read-off possible from any angle thanks to a pair of angled scales. Removable magnet for attaching sockets with 1/2" internal square drive. For use in conjunction with tightening tools such as Service MANOSKOP® No 730N. Since this tightening method requires a pre-determined snug torque to be applied, it is essential to choose a torque wrench covering both snug torque as well as maximum torque required to reach the recommended tightening angle. Whether 1/2" or 3/4" sq.dr. Torque Angle Gauge is used depends upon the square drive of the appropriate torque wrench employed.

MULTIPOWER

Makes child's play of the largest torques.

MULTIPOWER - or really "tough work".

STAHLWILLE MULTIPOWER torque multipliers with planetary gears take the fatigue out of tightening or loosening stiff or large bolt connections. A long lever is not necessary.

STAHLWILLE MULTIPOWER multiplies human strength; steady torque transfer is easy on nuts and bolts. Even the largest torques are transferred with ease and precision over long periods.

Accordingly, construction materials and workmanship are extremely robust.

When combined with STAHLWILLE torque wrenches, MULTIPOWER really shows its strength.

The MULTIPOWER range extends to 5000 N m/3687 ft.lb.

MULTIPOWER tools are also available on request up to 12000 N m/8850 ft.lb.

The MULTIPOWER from 2000 N m are fitted with an anti-backlash device.

MULTIPOWER

with overload protection and planetary gears, in carrying case, with spare hex. for overload device, deviation of indication $\pm 5\%$.

This is how to achieve the correct tightening torque - even if you are using inserts with an extension

When you tighten fasteners using inserts whose extension length S deviates from the standard length S_F , it is necessary to recalculate the setting/display value for the torque wrench in use.

Caution! If adapters are combined with inserts or special tools, use the sum of the extensions = ΣS . Where the special tool is angled to the side, W_K will have to be determined empirically.

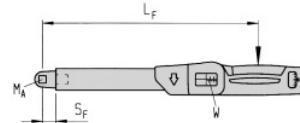

$W_K = \frac{M_A \cdot L_F}{L_K} \left[\frac{\text{Nm} \cdot \text{mm}}{\text{mm}} \right]$ $W_K = \frac{M_A \cdot L_F}{L_F - S_F + S \text{ (or } \Sigma S\text{)}}$	M_A = desired tightening torque W = reading/setting $W = M_A$ W_K = adjusted reading or setting value $W_K \neq M_A$ L_F = functional length (see dimension table for torque wrenches) L_K = adjusted functional length $L_K = L_F - S_F + S \text{ (or } \Sigma S\text{)}$	S = extension of STAHLWILLE inserts or special tools (see dimension table for inserts) S_F = standard extension (see dimension table for torque wrenches) ΣS = total of all extensions of the attached inserts $S_{\text{adapter}} + S_{\text{insert}} + \dots$
---	--	--

Normal situation

Torque wrench No 730N/10 combined with square drive insert tool No 734/5 and socket size 13 mm.

Required tightening torque for the screw $M_A = 40$ Nm

Dimension table for torque wrenches: $L_F = 336$ mm, $S_F = 17.5$ mm
 Dimension table for square drive insert tools: $S = 17.5$ mm

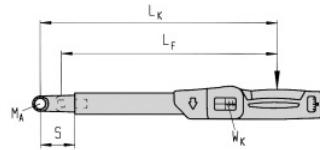

No adjustment to setting value required on torque wrench.
 $\rightarrow S = S_F$
 $\rightarrow W = M_A$

Example 1: adjusted setting value (1 insert tool)

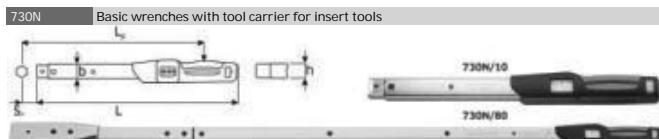

Torque wrench No 730N/20 combined with ring insert tool No 732/40 size 36 mm

Required tightening torque for the screw $M_A = 190$ Nm

Dimension table for torque wrenches: $L_F = 424.5$ mm, $S_F = 25$ mm
 Dimension table for ring insert tools: $S = 28$ mm

*Caution! Modified settings on torque wrench (refer to note on page 207).

S

Example 2: adjusted reading (insert tool and adapter)

Torque wrench No 71/2 combined with square drive insert tool No 734/5 and adapter No 447 size 10 mm

Required tightening torque for the screw $M_A = 25$ Nm

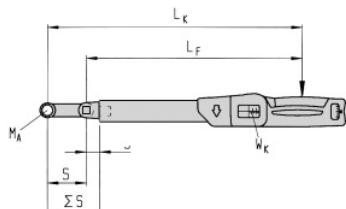

Dimension table for torque wrenches: $L_F = 336$ mm, $S_F = 17.5$ mm
 Dimension table for square drive insert tools: $S = 17.5$ mm
 Dimension table for adapters: $S = 50.8$ mm

$$W_K = \frac{M_A \cdot L_F}{L_F - S_F + \Sigma S} = \frac{25 \text{ Nm} \cdot 336 \text{ mm}}{336 \text{ mm} - 17.5 \text{ mm} + 50.8 \text{ mm}} = \frac{25 \text{ Nm} \cdot 336 \text{ mm}}{386.8 \text{ mm}}$$

Adjusted setting value $W_K = 21.7$ Nm

→ value to set 189 Nm

→ $S \neq S_F$
 $\rightarrow W \neq M_A$

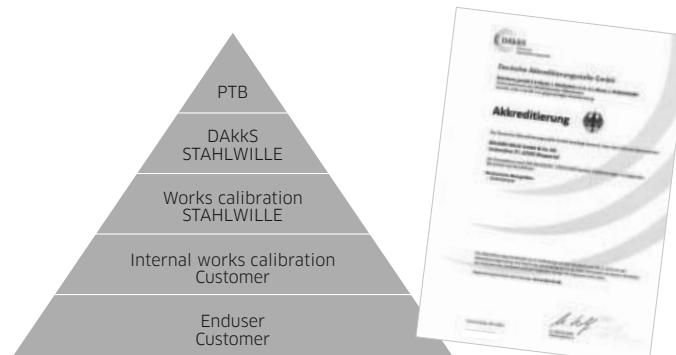

Audited. Documented. Certified. STAHLWILLE DAkkS calibration laboratory

You can ensure controlled tightening, record the results of tightening processes, monitor torque tools.

STAHLWILLE's DAkkS calibration laboratory for torque is accredited by the German Accreditation Body in accordance with DIN EN ISO/IEC 17025: 2005. Which means the specific requirements listed in Technical Specification ISO/TS 16949 relating to testing laboratories are met. Absolutely essential: This is absolutely essential to all suppliers in the automotive sector!

The transfer torque wrenches and torque transducers in use at STAHLWILLE's DAkkS calibration laboratory are subject to regular examination by the German Federal Physics Institute (PTB) in Braunschweig. The accuracy of the torque wrenches must be proved in a series of steps and these must be traceable. Only in this way can the reliability of the readings be guaranteed. During the first stage, the end-user checks the accuracy of the torque tools in-house using suitable calibrated testing equipment. At the next stage, this test equipment is checked in STAHLWILLE's DAkkS calibrating laboratory. This accreditation by the German Accreditation Body (DAkkS) in accordance with DIN EN ISO/IEC 17025: 2005 guarantees the direct link between the measuring equipment and the national standard as laid down in DIN EN ISO 9001: 2008.

7794-2 Motorised calibrating and adjusting tool from 1 to 400 N m

The electronic perfectControl calibrating unit with its electric drive considerably reduces the amount of effort and time required for calibration and adjustment tasks on torque wrenches.

- measurement possible without moving the point of application of force.
- prevents faulty readings thanks to precision-mounted spindle and finely regulated motor.
- extremely accurate calibration thanks to optimised bearings and square drives for the transducers.
- rapid, easy change of transducers thanks to quick-release latching system.
- convenient pushbutton controls for clockwise and anticlockwise measurements with automatic speed compensation.
- saves time because the bridge support is locked in place using a single-handed eccentric lever.
- transmission of readings to a PC via USB interface for further processing, analysis and archiving.
- calibration certificates can be printed or saved as a PDF file after calibration.
- as found / as left calibrations can be documented.
- during calibration, DIN EN ISO 6789:2003 in numerous languages is supported. Additional standards and works standards are available on request.
- can be upgraded to perfectControl calibrating unit No 7794-3 for angle-controlled wrenches.
- **calibration up to 1000 N m is possible using the easily attached extension unit No 7791-1** (see p. 214)
- design patent, other patents applied for

Both clicking and indicating torque wrenches can be calibrated. Calibration of transducers is possible using reference torque wrenches No 7770-100 and 7770-1000, available on request. 4 calibrating square drive insert tools No 734K (sizes 4, 5, 20, 40), 6 square drive adaptors (No 409M, No 7787, No 7788, No 7789, No 7789-4, No 7789-5), 1 USB adaptor No 7757-1, software Torkmaster, 1 jack cable No 7751, 1 cable No 7751-1 with jack plug and self-locking precision plug, 1 low-temperature cable connector, 1 hexagon key wrench No 10760CV size 2 mm are included. The unit is supplied without the torque wrench, transducers or notebook.

Transducers laboratory No 7728 (see p. 211).

7794-3 Automated calibrating and adjusting unit from 1 to 400 N m

Fully automatically calibrates electronic torque and angle-controlled wrenches made by STAHLWILLE

Design patent, other patents applied for. Model is the same as perfectControl No 7794-2, except it is additionally suited to calibrating angle-controlled wrenches. Optimum adaptation to working height with motorised height adjustment.

4 calibrating square drive insert tools No 734K (sizes 4, 5, 20, 40), 6 square drive adaptors (No 409M, No 7787, No 7788, No 7789, No 7789-4, No 7789-5), 1 USB adaptor No 7751, software Torkmaster, 1 jack cable No 7751, 1 cable No 7751-1 with jack plug and self-locking precision plug, 1 low-temperature cable connector, hexagon key wrench No 10760CV size 2 mm are included.

Supplied without torque wrench, transducer or notebook.

7728 Transducers laboratory

patented, for laboratory environments, with optimised measuring range, for calibrating torque wrenches and torque screwdrivers, for use together with perfectControl calibrating unit No 7794 or calibration system No 7706. High degree of accuracy thanks to conversion and digitization of readings within the transducer itself. With high-grade self-locking precision plug. Not susceptible to lateral forces due to low-profile construction.

With DAkkS calibration certificate. Max. display deviation value $\pm 0.5\%$ of the reading. Further details on request.
Supplied in sturdy plastic case.

¹⁾ for calibrating torque screwdrivers

²⁾ available from June 2014

Audited. Documented. Certified.

STAHLWILLE calibration

Calibration - Calibration is the regular examination of the accuracy and reliability of torque tools. This is done using special-purpose calibrating equipment which is subject to stringent monitoring. This is essential because torque tools are precision instruments which are very often in use in safety-relevant environments. They are expected to provide the same level of accuracy in their readings reliably over long periods of time. In order to ensure these standards are guaranteed, it is essential that examination by means of calibration takes place at regular intervals and is documented.

At the very least, a calibration system must include the following components:

1

Mechanical loader - The mechanical loader is required for rapid, accurate fixing and operation of the torque wrench. The mechanical loader also ensures that the DIN EN ISO 6789 requirement for clicking torque wrenches is fulfilled, i.e. that, above 80% of the final torque value, the force is applied slowly and steadily within a period of 0.5 to 4 seconds.

5

2

Transducer - The torque applied using the torque wrench is digitalised within the transducer and transmitted via USB cable to the PC, which ensures error-free transmission.

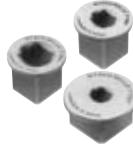

3

USB-Adaptor - From here, the data are transferred to the PC.

4

Cable - for connecting laboratory transducers No 7728 to USB adaptor, with jack plug and self-locking precision plug.

5

Square drive adaptor - The set includes the square drive adapters necessary to make full use of the measuring range of the transducers; e.g. for transducer No 7723-3 (internal square drive 3/4"), square drive adapter No 7787 (1/4" female to 3/4" male), No 7788 (3/8" female to 3/4" male) and No 7789 (1/2" female to 3/4" male).

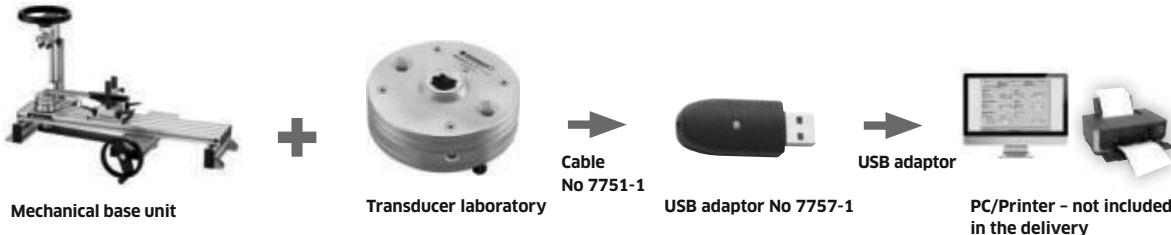

6

Software - The data received in this way can then be used to issue a calibration certificate in accordance with DIN/ISO 6789.

Mechanical loaders for torque wrenches and torque screwdrivers

Thanks to the modular design, end users can put together their own mechanical loader according to their specific requirements. Extensions with additional components are possible any time. All the components are carefully matched to ensure compatibility and can be easily fitted. This slot-in system is easy to use and has a very accurate fit. The components can be quickly and easily locked together using the integrated screw joints. The display unit can be attached at various points of the system via a holder. In this way, every user can organise his or her work to suit themselves.

7791 Mechanical base unit from 1 to 400 N m

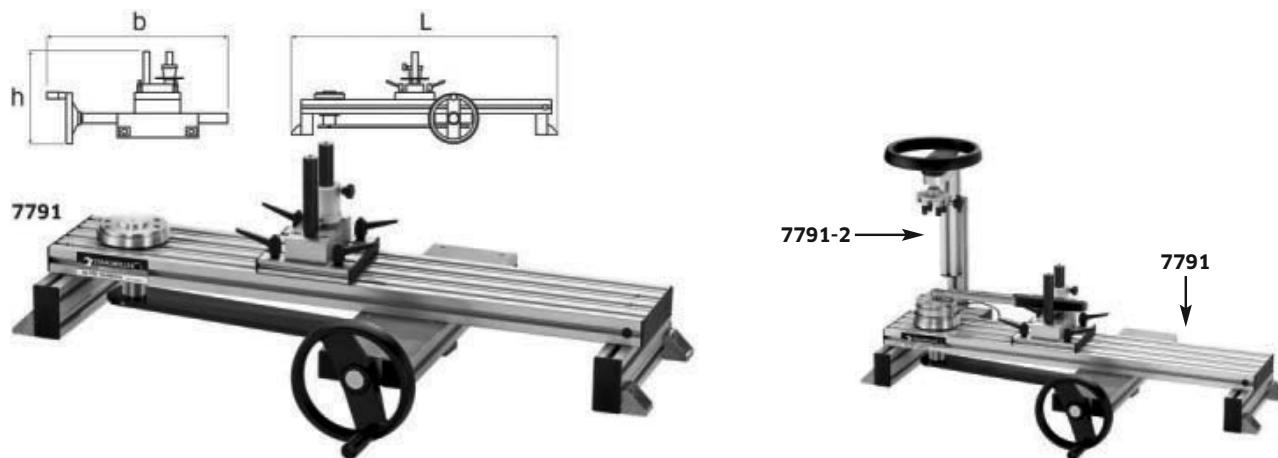

Measurement possible without moving the point of application of force.

Thanks to a specially designed force transmission system, mechanical loader No 7791 avoids the risk of the point of force application shifting during the calibration process. The lever below the test rail is actuated in a linear direction by the handwheel acting on a spindle. The linear motion is translated into a rotary movement which acts on the transducer. The torque wrench to be calibrated remains in the same position throughout the calibration process.

This prevents measuring errors caused by the point of force application being moved. Thanks to a low-friction linear ball bearing, the torque wrench is automatically levelled as it is placed in the unit. A further linear ball bearing ensures the contact with the torque wrench is friction-free. The reduction in lateral forces acting on the transducer and in the friction on the point of contact with the torque wrench results in a corresponding reduction in mismeasurement.

Patents applied for.

Supplied without torque wrench, transducer, display unit and holder.

Torque testers

Electronic torque tester for torque wrenches Sensotork® 7707 W (For complete calibration systems, see p. 209, 213)

Compact workshop-based torque tester for easy adaptation by replacement of the transducers.
High degree of accuracy thanks to flat transducer and conversion and digitalisation of readings within the transducer (see p. 217).

High degree of safety through display showing actual torque read-off where clicking torque wrenches are used.

7707 W

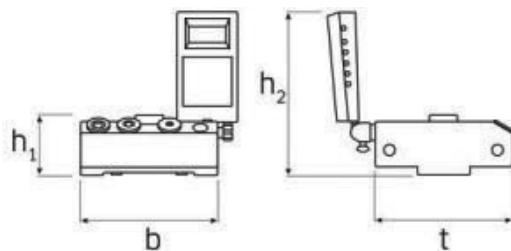

Workshop torque tester Sensotork®

Electronic workshop torque tester for torque wrenches, consisting of:

- transducer, patent
- holder
- display unit (registered design)
- tripod for display unit (with 1.5 m cable)
- spiral cable
- mains adaptor (110 V-230 V with interchangeable socket adaptors) or direct connection to 12 V in-car supply is possible
- square drive adaptor (No 7707-2W, No 7707-2-1W, No 7707-2-2W, No 7707-3W)
- kit for attaching the unit to a workbench or wall in a horizontal or vertical testing position

for clockwise and anticlockwise use. Units of measurement: N m, ft.lb, in.lb. The easily interchangeable transducers are attached to the holder by means of a QuickRelease safety lock. Low lateral forces thanks to low-profile transducers, automatic detection of the transducer, flexible and user friendly because the unit can be used horizontally or vertically and the display unit can be placed in many positions, additional tripod with 1.5 m cable for mounting the display unit to facilitate visual monitoring when using longer torque wrenches, especially broad measuring range from approx. 2% to 100% of rated value. The software No 7759-4, including USB hub and jack cable (see p. 218), enables readings to be transferred to the PC for documenting and for generating calibration certificates in accordance with DIN EN 6789:2003 (no separate power supply needed, power comes from PC). While individual transducers are being recalibrated, the torque tester itself remains on-site for further use. Wide range of application (-20°C to +60°C). Complies with DIN 51309: 2005, Class 2 and DKD-R 3-8: 2003. With certificate. Supplied in sturdy plastic case.

5

QR QuickRelease

Rapid change and firm locking of the transducers thanks to the QuickRelease safety lock.

Interchangeable square drive adapters:

A set of interchangeable square drive adapters are conveniently stored in the mounting block for a range of different drive sizes.

¹⁾ for calibrating torque screwdrivers

²⁾ for use with mechanical loader No 7792 and 7792-1 (see p. 215)

Note!

Torque testers are measuring instruments! They have to be regularly calibrated and, where necessary, adjusted, using suitable calibration equipment. We recommend recalibrating every 12 months.

Assembly pretension forces and tightening torques

Assembly pretension forces F_M and tightening torques M_A for screws with standard metric threads to DIN 13, Page 43 (M 1.6-M 2.5-M 3 to M 39) and head contact sizes such as DIN 912 (DIN EN ISO 4762), DIN 931 (DIN EN 24014), DIN 934 (DIN EN 24032), DIN 6912, DIN 7984, DIN 7990. The table readings F_M and M_A are based on the SI unit Newton (Newton). 1 N = 0.102 kp, 1 Ncm = 0.102 kpm, 1 kp = 9.81 N, 1 kpm = 9.81 Nm. The assembly pretension forces F_M listed in the table above result in 90% exploitation of a screw's yield strength $\sigma_{0.2}$ (DIN ISO 898 Part 1) through the comparative tension σ_{red} , which depends on the coefficient of thread friction μ_G . The table of assembly pretension forces shows what quality of which screw is required for a particular thread friction to generate a certain required assembly pretension force F_M . The tightening torque M_A required to achieve 90% yield strength exploitation for a screw whose dimensions and quality are given can be determined from the right-hand table having regard to a specific underhead friction (μ_u). To determine the rated torque to be applied, deduct half the spread of the corresponding torque wrench from the applicable tightening torque M_A in the table. Calculation of the table entries and notes on their application to VDI 2230, Page 1.
