### Simplifies Tube Alignment and Improves Tube Joint Welds

The HOG TIE® boiler tube joint alignment clamps speed the welding process for boiler tube waterwall panel replacement by quickly and accurately aligning new boiler tube ends with existing tubes in preparation for creating welded tube joints.

The two piece design is simple and easy to use. One piece has a through hole and the other has a threaded replaceable insert. Bolts draw the assembly together. Each bolt passes through the through hole and threads into the threaded insert. With the two tube ends between the HOG TIE® assembly, the tack weld window on each HOG TIE® piece is centered. When the bolts are tightened, it draws the tube ends into alignment.

During this process, adjustments can be made to ensure a proper gap is maintained between the tube ends before tack welding them. After the HOG TIE® is removed, the tack weld holds the tube ends in alignment, allowing for full access to the tube joint in order to complete the tube joint weld.

Accurate tube end alignment helps to make a better welded tube joint and reduces the risk of tube joint failure due to inaccurate alignment which saves time and money on costly boiler shut-down and re-work.

The HOG TIE® alignment tool can also be used in other applications requiring accurate alignment for tube and pipe welding. It is made of precision machined high strength steel for long service and is available for tube sizes from 1.125" (28.6mm) O.D. to 3.250" (82.6mm) O.D.

HOG TIE® tube alignment tools speed waterwall boiler tube fit-up and helps reduce tube joint failure due to misalignment.

Available impact wrench draws the HOG TIE® assembly together for fast tube end alignment.

HOG TIE® assemblies are designed for use on boiler tube waterwall panels with 0.5" / 12.7mm wide membrane. For other pipe and tube applications please consult factory.

Available HOG TIE® kits include an impact tool, 7/8" socket, safety lanyard, spare bolts, spare threaded inserts and carrying case.
